

Static Data Member

- * They are attributes of classes or class member
- * It is declared using static keyword
- * Only one copy of that member is created for the entire class & is shared by all the objects.
- * It is initialized before any object of this class is created.

```
class User {
```

```
    String name;
```

```
    int acno; balance
```

```
    static int total-user.
```

```
    public:
```

```
        User(string n, int a, int b) {
```

```
            name = n
```

```
            acno = a
```

```
            balance = b
```

```
            total-user++;
```

```
        };
```

```
        int User::total-user = 0;
```

```
int main() {
```

```
    User U1("Ankit", 24368, 700);
```

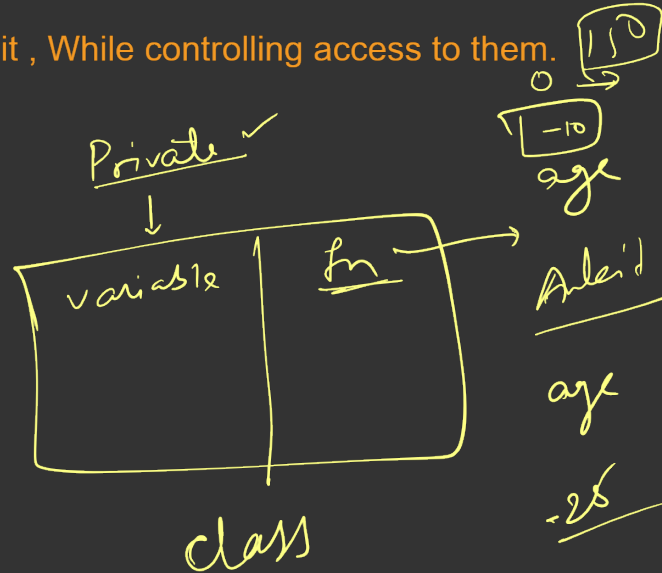

```
    User U2("Khushi", 34683, 500000);
```

Encapsulation

Wrapping up of data & information in a single unit , While controlling access to them.

{data hiding}

```
class User {
```

```
    String name;
```

```
    int balance;
```

```
    int age;
```

```
    public:
```

```
        User (String n, int b) {
```

```
            name = n;
```

```
            balance = b;
```

```
        } age = a;
```

```
    void deposit (int amount) {
```

```
        if (amount > 0)
```

```
            balance += amount;
```

```
        else {
```

```
            cout << "Invalid";
```

```
        }
```

```
int main () {
```

```
    User u1 ("Rohit", 1000, 200)
```

```
    u1.deposit (10000)
```

```
    u1.deposit (-500)
```

u1

Rohit
2000

Abstraction

- * Displaying only essential information & hiding the details

```
class User {  
    string name;  
    int balance;  
public:  
    User (string n, int b)  
        name : n  
        balance : b;  
}  
void deposit (int am) {  
    if (am > 0)  
        balance += am;  
}
```

```
int main () {  
    User u1 ("Ankit", 10000);  
    u1.deposit (320);  
}
```

meth. h

int ans = pow(2, 7);

Swab(a, b)
